Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/670,703

Applicant(s)

IRISH ET AL.

Examiner

Midys Rojas

Art Unit

2185

Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05 March 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-34 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-34 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/CB/CIC)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(c), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(c) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/5/08 has been entered.

Response to Arguments

2. Applicant's arguments, filed on 3/5/08, have been considered but are not persuasive.

Applicant continues to argue that the combination of Bonola with Applicant's Admitted Prior Art is improper because the examiner is misinterpreting a candid discussion of "the conventional memory allocation process" and a "review of the background section of applicant's disclosure reveals no indication that the subject matter discussed is prior art". However, the examiner maintains that the discussion of the prior art relied upon discloses the storage of data using group entries and pre-allocating the memory by dividing the memory into one or more sections of an anticipated group size (Specification, page 1, paragraph 2). Furthermore, the examiner would like to point out that in agreeing that the subject matter is discussion of "the conventional memory allocation process" support's the examiner's characterization of this information as admitted prior art since a conventional process is one that is generally known, generally practiced, and represents an accepted standard; thus available as prior art.

Applicant also argues that the references relied upon do not teach the dynamically allocated size that is the smallest sized group entry necessary to store the alleged portion of the alleged set of data. However, for the purposes of the invention of Bonola, the smallest size needed is equivalent to a heap sub region that is less than twice the memory required for the application. The system of Bonola continues to partition the sub region until it reaches this smallest required size. Therefore, the size of the yielded sub region is representative of the smallest sized group entry necessary to store the alleged portion of the alleged set of data.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-34 are rejected under 35 U.S.C. 103(a) as being obvious over Bonola (2001/0011338) in view of Applicant's Admitted Prior Art (Page 1 of Specification).

Regarding Claim 1, Bonola discloses a method comprising:

receiving a set of data (in the process of executing an instruction within an application program, paragraph 0013);

determining whether a free entry of a size required by a portion of the set of data exists in one of a plurality of sections of a memory (executes HeapAlloc... examine heap data structure [to] determine if there is an appropriately sized heap sub-region in the free list wherein the free list contains unassigned heap sub-regions, paragraph 0037);

determining whether the memory includes one or more sections of an unallocated size (unassigned heap sub-region, paragraph 0034-0035); and

if a free group entry of the size required by the portion of the set of data does not exist in one of the plurality of sections of the memory (if N exceeds M, then there is no heap sub-region within the heap that can accommodate the demand..., paragraph 0038), determining whether the memory includes one or more sections of an unallocated size; and if the memory includes one or more sections of an unallocated size, allocating one of the sections of an unallocated size to the size required by the portion of the set of data thereby creating a section of a dynamically allocated size, the section of the dynamically allocated size including one or more group entries of the size required by the portion of the set of data (see paragraph 039, address of the higher memory address is entered into the N list of the free list... of the remaining half of the heap sub-region contains twice as much memory as is required by the requesting application, the remaining half of the heap sub-region can be further divided in half... steps are repeated until a heap sub-region is yielded which does not have twice as much memory as is required. The sub-region is then assigned to the application),

the dynamically allocated size being the smallest sized group entry necessary to store the portion of the set of data (for the purposes of the invention of Bonola, the smallest size needed is equivalent to a heap sub region that is less than twice the memory required for the application. The system of Bonola continues to partition the sub region until it reaches this smallest required size. Therefore, the size of the yielded sub region is representative of the smallest sized group entry necessary to store the alleged portion of the alleged set of data, see paragraph 0039)

The unallocated memory of Bonola's invention is not allocated to an application, however, it is allocated to a heap data structure holding free memory areas.

Bonola does not teach the storage of group entries and the memory being pre-allocated with a group size. Applicant's Admitted Prior Art discloses the storage of data using group entries and pre-allocating the memory by dividing the memory into one or more sections of an anticipated group size (Specification, page 1, paragraph 2). It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the system of Bonola to include the storage of data using group entries and the pre-allocation of memory with a group size since this method of memory allocation provides for efficient allocation for networked systems.

Regarding Claim 2, Bonola discloses a method wherein determining whether a free group entry of the size required by the portion of the set of data exists in one of a plurality of sections of the memory includes determining whether a free group entry of the size required by the portion of the set of data for uniquely identifying each portion of the set of data exists in one of the plurality of sections of memory (...no heap sub-region within heap 302 can accommodate a demand for X bytes of memory from application 202, paragraph 0038 wherein the memory is allocated to the heap data structure).

Regarding Claim 3, Bonola discloses a method wherein determining whether the memory includes one or more sections of an unallocated size includes accessing a control structure for one or more sections of the memory, the control structure storing information about the structure of a section (heap data structure 304).

Regarding Claim 4, Bonola discloses a method further comprising, from the section of a dynamically allocated size, allocating an initial group entry of the size required by the portion of the set of data for storing the portion of the set of data (... the address of the heap sub-region contained in the entry is then assigned to the application, paragraph 0037)

Regarding Claim 5, Bonola discloses a method further comprising: receiving a modified set of data; determining whether a portion of the modified set of data may be stored more efficiently in a group entry of a different size from another section of the memory such that the aggregate number of unused entries in the group entries used for storing the modified set of data is minimized (...if the remaining half of the heap sub-region contains twice as much memory as is required by the requesting application, the remaining half of the heap sub-region can be further divided..., paragraph 0039); allocating a group entry of the different size required by the portion of the modified set of data from another section of the memory to store the portion of the modified set of data (repeating steps 532-540 until a heap sub-region is yielded which does not have twice as much memory as is required and then assigning the sub-region to the application... paragraph 0039); and de-allocating the initial group entry to the section of memory from which the initial group entry was allocated (wherein de-allocation of the initial group entry occurs when the newly selected heap sub-region is placed in the N list and replaces the initial entry, Figure 5).

Regarding Claim 6, Bonola discloses a method further comprising updating the control structure that stores information about the structure of the other section (...an entry is removed from the N list in the free list 306, paragraph 0038).

Regarding Claim 7, Bonola discloses a method further comprising updating the control structure that stores information about the structure of the section of memory from which the

initial group entry was allocated (...an entry is removed from the N list in the free list 306, paragraph 0038).

Regarding Claim 8, Bonola discloses a method wherein de-allocating the initial group entry to the section of memory from which the initial group entry was allocated leaves all entries of the section unused (when the application is finished using an assigned heap sub-region, it can return the heap sub-region to the heap using the HeapFree instruction, thus leaving those entries unused, paragraph 0040).

Regarding Claim 9, Bonola discloses a method further comprising clearing the group entry size allocation of the section (HeapFree instruction clears the allocation of the sections since the heap contains unassigned memory, paragraph 0040-0041).

Regarding Claim 10, Bonola discloses a method further comprising, if the memory does not include one or more sections of an unallocated size, determining whether a free group entry of a size larger than the size required by the portion of the data exists (Paragraph 0039, heap sub-region with the higher memory address is entered into the N list...), wherein sections allocated to the smallest available size larger than the size required by the portion of the data are checked prior to sections allocated to larger available sizes (continue dividing sub-region in half until sub-region contains less than twice as much memory as required).

Regarding Claim 11, Bonola discloses a method further comprising, if a free group entry of a size larger than the size required by the portion of the data exists in a section allocated to a size larger than the size required by the portion of data, allocating an initial group entry of the size larger than the size required by the portion of the set of data from the section allocated to a size larger than the size required by the portion of the data for storing the portion of the set of

data (paragraph 0039, if the sub-region contains less than twice as much memory as needed... the sub-region should be assigned).

Regarding Claim 12, Bonola discloses a method further comprising, if a free group entry of a size larger than the size required by the portion of the data does not exist outputting an error condition (Paragraph 0038, there is no sub-region within the heap that can accommodate a demand for X bytes... HeapAlloc instruction will fail...).

Claim 13 is rejected using the same rationale as that of Claim 5.

Claim 14 is rejected using the same rationale as that of Claim 6.

Claim 15 is rejected using the same rationale as that of Claim 7.

Claim 16 is rejected using the same rationale as that of Claim 8.

Claim 17 is rejected using the same rationale as that of Claim 9.

Claim 18 is rejected using the same rationale as that of Claim 1 wherein the memory is represented by system memory 114, the plurality of registers are within heap data structure 304, and the dynamic allocation logic is equivalent to the method for dynamically allocating memory in a computer system of the invention (paragraph 0013, and Figure 3).

Claim 19 is rejected using the same rationale as that of Claim 2.

Claim 20 is rejected using the same rationale as that of Claim 3.

Claim 21 is rejected using the same rationale as that of Claim 4.

Claim 22 is rejected using the same rationale as that of Claim 5.

Claim 23 is rejected using the same rationale as that of Claim 6.

Claim 24 is rejected using the same rationale as that of Claim 7.

Claim 25 is rejected using the same rationale as that of Claim 8.

Claim 26 is rejected using the same rationale as that of Claim 9.

Claim 27 is rejected using the same rationale as that of Claim 10.

Claim 28 is rejected using the same rationale as that of Claim 11.

Claim 29 is rejected using the same rationale as that of Claim 12.

Claim 30 is rejected using the same rationale as that of Claim 5.

Claim 31 is rejected using the same rationale as that of Claim 6.

Claim 32 is rejected using the same rationale as that of Claim 7.

Claim 33 is rejected using the same rationale as that of Claim 8.

Claim 34 is rejected using the same rationale as that of Claim 9.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Midys Rojas whose telephone number is (571) 272-4207. The examiner can normally be reached on M-TH 6:30am - 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sanjiv Shah can be reached on (571) 272-4098. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
